# ORIGINAL SCHNORR

IEC are the only UK authorised distributor for SCHNORR original products.

## DISC SPRINGS

SCHNORR Disc Springs are innovative precision mechanical components that find a wide range of applications across industries.

Designed to provide consistent and reliable load distribution, these disc springs are used to address challenges related to compression, vibration, and thermal expansion in various mechanical systems.

Whether you need to maintain joint integrity, dampen vibrations, or compensate for thermal fluctuations, SCHNORR Disc Springs offer a versatile and dependable solution for optimising load management.

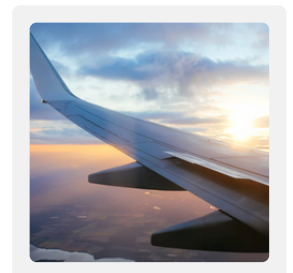

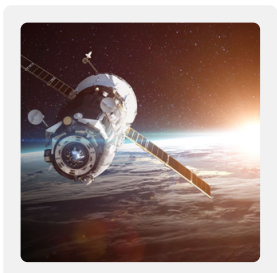

- high-quality Schnorr disc springs manufactured in Germany
- manage loads efficiently within a compact design
- can be tailored to meet specific load, material and dimension requirements
- reduce stress concentrations with uniform load distribution
- vibration damping increases reliability of dynamic systems
- thermal compensation for stable load performance
